

IMPORTANT

Before operating your LampLust Phoebe Solar Fairy Lights in Glass Jars, please make sure that you carefully read through these instruction sheets.

NOTE: The important safeguards and instructions that appear in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and care are factors that can't be built into any product. This approach must be used by the person(s) caring for and operating the solar lights.

GENERAL INFORMATION

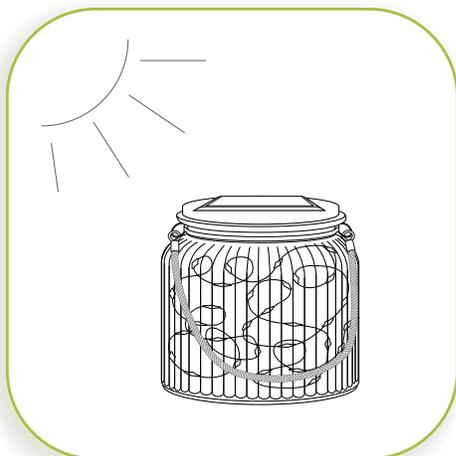

Battery installation should only be performed by an adult. Only batteries of the same of equivalent type as recommended should be used (rechargeable). Battery leakage can cause corrosion and damage to this product so please remove non-functioning batteries immediately. Remove batteries from product during long periods of non-use. DO NOT DISPOSE OF IN FIRE. Please dispose at your local recycling facility.

WHAT WE PROVIDE

- Two Solar Fairy Lights in Glass Jars with Rope Handles
- 2 x NiMH AA Rechargeable Batteries (Pre-installed, 1 Per Jar)

STEP BY STEP INSTRUCTIONS

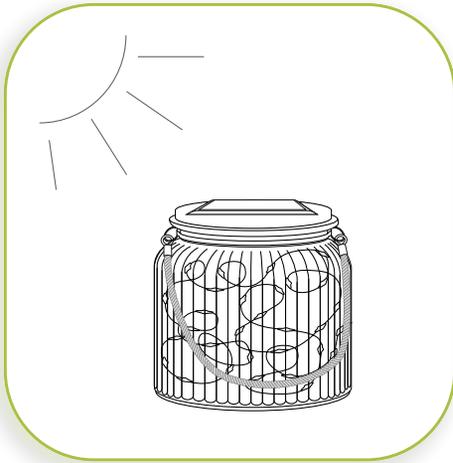

Before operating your solar lights, remove packaging and ensure that the switch on the bottom of the battery compartment (located on the base of the jar lid), has been moved to "ON". The solar light must be turned on in order for the battery to charge.

1

CHOOSING THE RIGHT LOCATION

Before setting up the solar lights, you will need to select the right location for installation. The solar lights need to be in a non-shaded area where sunlight is not obstructed by buildings, walls, trees, bushes or any shadows that these objects create throughout the day. Shady locations will not allow the battery to fully charge and may reduce the time the solar lights stay on. Avoid proximity to other light sources, which may cause the solar lights to not operate correctly.

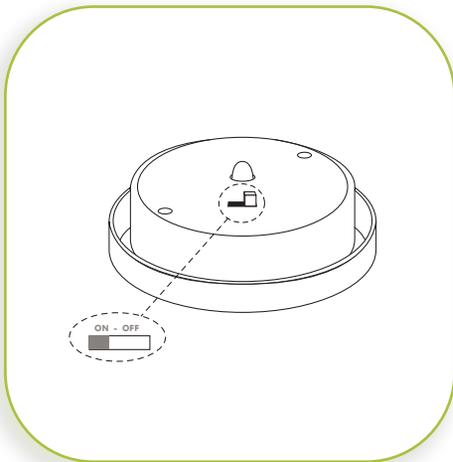

2

SOLAR CHARGING

Maximum sunlight will give the internal battery the best charge and give you the best results. The solar light will not be very bright or long lasting, until the battery is fully charged. Once charged, the solar light will turn on at dusk and remain on for up to 8 hours, depending on the charge received that day.

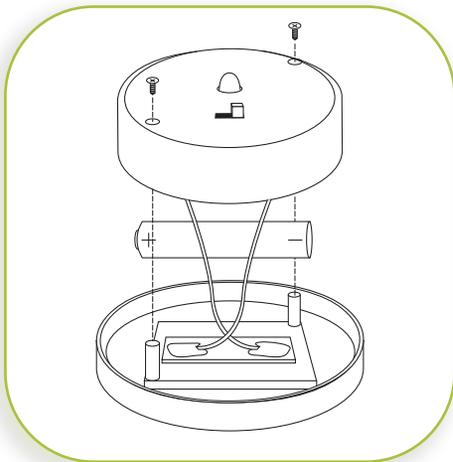

NOTE: You may charge the battery in a battery charger, or charge it with the solar panel. When using the solar panel, be sure that the battery receives a full day's worth of sunlight before use.

3

ON/OFF SWITCH

The ON/OFF switch is located on the bottom of the jar lid. Use this switch to turn the jar light on or off. To maximize battery life, manually turn switch off during long periods of non-use.

4

BATTERY REPLACEMENT

Batteries may need replacement every 1-2 years, depending on the operating conditions. To install a new battery, carefully unscrew the panel under the jar lid to avoid damaging internal wires. When installing a new battery, be sure to insert with the correct polarity as indicated (+/-) and secure battery compartment before use.

TROUBLESHOOTING

Solar lights not operating properly at night may be caused by one of the following conditions:

- The switch may not be turned to "ON." Ensure that the switch has been moved to the "ON" position.
- Low light levels during the day, caused by the position in which the light is placed, or lack of sunlight, will shorten the operating time of the solar light at night.
- If the surface of the solar panel is dirty, the charging ability will be reduced. Clean the surface occasionally with a damp cloth.
- The batteries might need to be replaced. In the event that they do need replacing, see "BATTERY REPLACEMENT" above.
- Please note that the solar light will not function in the daytime or in a brightly lit environment.
