

IMPORTANT

Before installing your Lights.com fixture, please make sure that you carefully read through these instruction sheets. Consider having your fixture installed by a qualified licensed electrician.

The bulbs are LED bulbs and designed to last a very long time. If you do need to replace the bulbs or if you want to upgrade the bulbs in the future, it is important to SAVE the suction cups. As you will need these to remove the bulb and install the new bulb. If you lose or misplace your suction cups please reach out to us for a replacement. Two suction cups have been provided in case one is misplaced.

NOTE: The important safeguards and instructions that appear in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and care, are factors that can't be built into any product. This approach must be used by the person(s) caring for and operating the fixture.

GENERAL INFORMATION

All electrical connections must be made in accordance with all ordinances, and Local and National Electrical Codes. These fixtures are intended for mounting to a standard 4" junction box. The box must be directly supported by the building structure and be ETL or U.L. Recognized.

COLLECTION APPLICATION MODEL NO.

Bixby 44" 6-Light Fixed Track LC004988
LC004989

WHAT WE PROVIDE

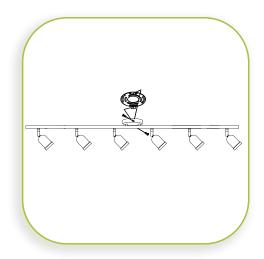

- 44" 6-Light Fixed Track
- Mounting & Wiring Hardware
- 6x TYPE-GU10 Bulbs
- 2 suction cups

WHAT YOU NEED

- Phillips head Screwdriver
- Wire Cutters
- Wiring Supplies as Specified by Electrical Code
- Electrical Tape

UNPACK YOUR FIXTURE

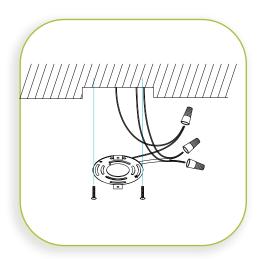

Carefully set aside all parts and pieces. Before starting your installation, disconnect the power by turning off the circuit breaker or by removing the fuse at the fuse box. Just turning the light off at the light switch is not sufficient to prevent electrical shock.

2

PREPARE FIXTURE AND MOUNTING PLATE

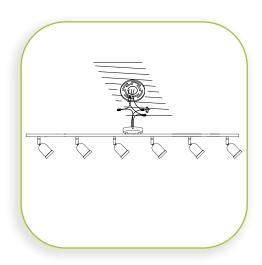

Remove the mounting plate from the backplate by unscrewing the screws from the backplate.

3

INSTALL THE MOUNTING PLATE

Note: This fixture can be mounted horizontal or vertical. If there is an existing fixture, remove it. Expose the supply wires from the J-Box. Insert supply wires through the mounting plate. Secure the mounting plate using the Phillips head screws provided. Tighten to secure.

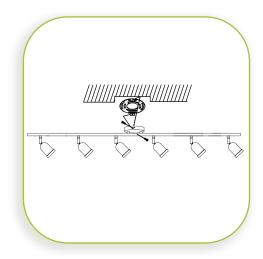

4

MAKE WIRE CONNECTIONS

Connect the BLACK fixture wire to the BLACK supply wire and the WHITE fixture wire to the WHITE supply wire.

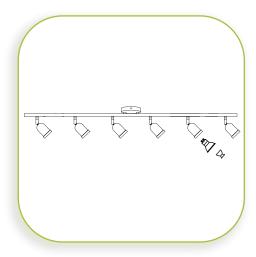

Connect the fixture ground wire to the J-BOX ground wire or wrap around one of the protruding screws on the mounting plate. Secure all connections with the supplied wire nuts and electrical tape (not supplied).

5

CONNECT FIXTURE TO THE MOUNTING PLATE

Position backplate over the mounting plate. Align the holes on the sides of the mounting plate with the two holes on the sides of the backplate and secure with the supplied screws.

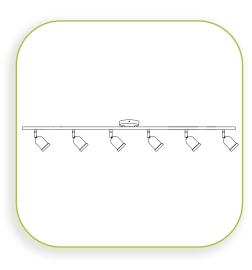

6

INSTALL THE BULBS

The bulb socket has two bumps that correspond with the two holes inside the socket. Push the suction cup on the front glass of the bulb, ensuring you have a tight connection.

Line up the two bumps on the bulb with the two holes in the socket. Once inserted turn clockwise holding the end of the suction cup until you feel the bulb lock in. This is about a quarter turn. Repeat this process for the other bulbs until all are installed.

7

RESTORE THE ELECTRICITY AND CHECK THE OPERATION OF YOUR NEW FIXTURE

CAUTION Please ensure that the fitting is cool and switched off before replacing the bulb. DO NOT use bulbs that might exceed the maximum wattage, stated on caution label.

DIMMER NOTE

For the best lighting experience, we recommend using a dimmer. Not only does this allow you to create a great ambiance, it allows for energy savings and extends the life of the bulbs.
