

IMPORTANT

Before using your LampLust Onada Solar Wall Lights, please make sure that you carefully read through these instruction sheets.

NOTE: The important safeguards and instructions that appear in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and care are factors that can't be built into any product. This approach must be used by the person(s) caring for and operating the solar lights.

GENERAL INFORMATION

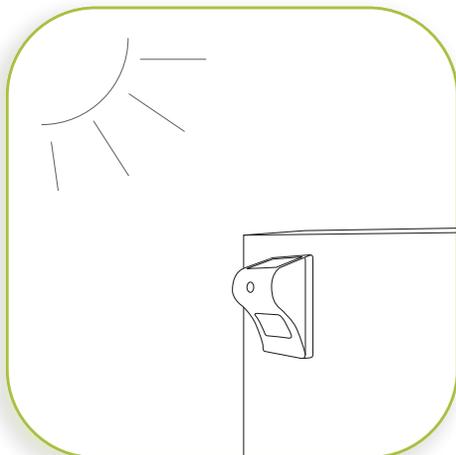

Battery installation should only be performed by an adult. Only batteries of the same or equivalent type as recommended should be used (rechargeable). Battery leakage can cause corrosion and damage to this product so please remove non-functioning batteries immediately. Remove batteries from product during long periods of non-use. DO NOT DISPOSE OF IN FIRE. Please dispose at your local recycling facility.

WHAT WE PROVIDE

- Two Onada Solar Wall Lights
- 2 x 500MAh LiFePO4 Rechargeable Batteries (Installed, 1 Per Wall Light)
- Mounting Hardware (Screws)

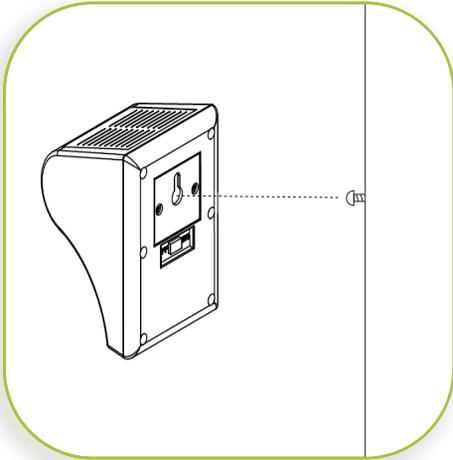

STEP BY STEP INSTRUCTIONS

Before operating your solar wall lights, remove packaging and ensure that the switch on the back of the wall light has been moved to "ON." The wall light must be turned on in order for the battery to charge.

CHOOSING THE RIGHT LOCATION

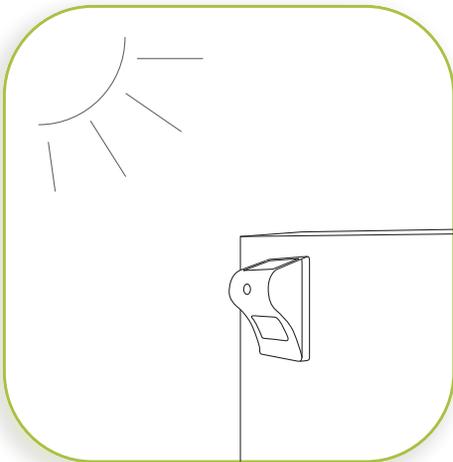

Before setting up the solar wall lights, you will need to select the right location for installation. The solar lights need to be in a non-shaded area where sunlight is not obstructed by buildings, walls, trees, bushes or any shadows that these objects create throughout the day. Shady locations will not allow the battery to fully charge and may reduce the time the solar lights stay on. Avoid proximity to other light sources, which may cause the solar lights to not operate correctly. Make sure solar lights are placed at least 6 feet apart to prevent light interference.

2

MOUNTING WALL LIGHTS

Drill one small hole into the wall where you want to mount each wall light. Next, screw in the screws (included) until they are protruding 1/4". Now you can place the hole on the back of the solar light over the screw and gently pull down to secure.

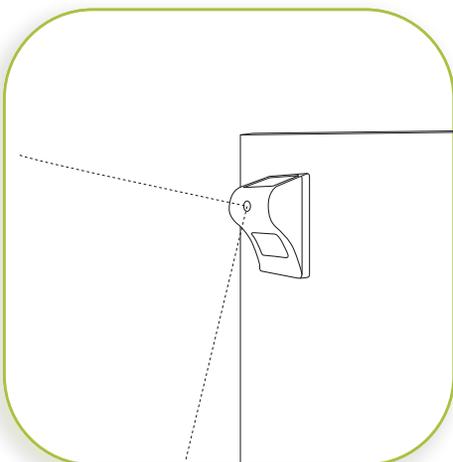

3

SOLAR CHARGING

Maximum sunlight will give the internal battery the best charge and give you the best results. The solar wall light will not be very bright or long lasting, until the battery is fully charged. Once charged, the wall light will turn on at dusk and remain on for up to 8 hours, depending on the charge received that day.

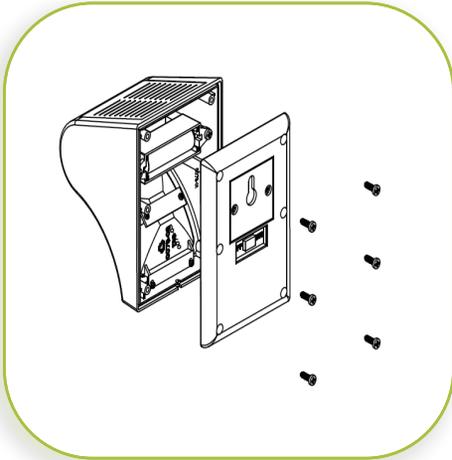

NOTE: You may charge the battery in a battery charger, or charge it with the solar panel. When using the solar panel, be sure that the battery receives a full day's worth of sunlight before use.

4

MOTION SENSOR

Once the solar lights are installed and charged, they will illuminate at dusk. The light will remain on standby with low illumination until the motion sensor is triggered. When triggered, the light will remain on high brightness for 30 seconds and then switch back to standby mode.

5

BATTERY REPLACEMENT

Batteries may need replacement every 1-2 years, depending on the operating conditions. To install a new battery, unscrew the panel on the back of the wall light. When installing a new battery, be sure to insert with the correct polarity as indicated (+/-) and secure battery compartment cover before use.

TROUBLESHOOTING

Solar wall lights not operating properly at night may be caused by one of the following conditions:

- The switch may not be turned to "ON." Ensure that the switch has moved to the "ON" position.
- Low light levels during the day, caused by the position in which the light is placed, or lack of sunlight, will shorten the operating time of the solar wall light at night.
- If the surface of the solar wall light is dirty, the charging ability will be reduced. Clean the surface occasionally with a damp cloth.
- The batteries might need to be replaced. In the event that they do need replacing, see "BATTERY REPLACEMENT" above.
- Please note that the solar wall light will not function in the daytime or in a brightly lit environment.
